

Maxi Car Care Range

Product Information

Pro-Ma Systems is proud to be able to provide a range of car care products, whose quality and performance we believe to be second to none.

Pro-Ma Performance **Maxi Car Care Range** is an extremely unique range of basic car care products.

Today, people spend more time and money caring for their second most expensive purchase. Consequently Pro-Ma Systems set about producing and securing products that they believe are second to none in the marketplace.

The chosen products had to be compatible with older vehicles, and newer vehicles sporting advanced paint technology, and synthetic body components. These magnificent products have already stood the test of time.

Maxi Shine Car Wash, Wax and Multi Purpose Cleaner

1. **Maxi Shine** contains an esterified Montan Wax (an extract of lignite) which is a synthetically modified natural wax. This helps improve the protection qualities of the product.
2. **Maxi Shine** absorbs onto the surface, forming a protective layer. Most other Wash and Wax products are easily removed by normal wash and rain.
3. **Maxi Shine** removes stubborn road grime and oil spots.
4. **Maxi Shine** does not contain polymers or silicone.
5. Should your vehicle need to be repainted, the **Maxi Shine** finish can easily be treated, without encountering the difficulties encountered with removal of silicone finishes.
6. Regular use of **Maxi Shine** will provide a long lasting, durable surface shine.
7. **Maxi Shine** is not limited to automotive applications. It has been used extensively on fibreglass boats and furniture, caravans, aluminium cladding, electrical appliances and treated flooring surfaces.

Application

Maxi Shine is an inexpensive, and an extremely easy product to use. Hose off loose dirt. Mix 30 mL of **Maxi Shine** with half a bucket of warm to hot water, and wash normally, hosing off a panel at a time, before the solution dries. For maximum shine, finish with a chamois or dry soft cloth.

Availability

375 mL and 4 litre

Maxi Sheen Surface Protectant and Rejuvenator

Maxi Sheen is a unique blend of silicone emulsions that provide a satin finish and spreadability to vinyl trim, and treated surfaces. It contains special humectants to retard the drying time, providing a greater opportunity for the product to bond to the surface, for greater protection. A product applied to vehicle dashboards must not be too glossy, otherwise undesirable windscreen reflections will result.

Maxi Sheen's satin finish does not present this problem. It forms a surface barrier to provide Ultra Violet A, B, and C, and Ozone protection, and restores the original beauty to rubber, vinyl, treated leather, sealed woodwork, laminated surfaces and fibreglass.

Maxi Sheen is odourless, non-flammable, non-poisonous and non-corrosive. It is environmentally sensitive, in that it does not contain any Chlorofluorocarbon propellants, and is very economical to use with its metered pump spray.

There is no need to buff the surface, unless an excess is evident. If the surface is soiled, pre-wash with a light application of Pro-Ma Citrus Cleaning Concentrate. For motor vehicles, it is ideal for dashboards, vinyl trim, tyres, mud flaps and vinyl coated bumper bars etc. Do not spray onto the dashboard, as some may contact the windscreen. (Should this happen, remove the product with Pro-Ma Glass and Chrome Cleaner).

Application

Spray onto a clean, dry cloth, and wipe over the surface. On dashboards this will provide a satin sheen, that will reduce any tendency to windscreen fogging in very strong sunlight.

Do not spray onto steering wheels, control surfaces, or any area where any slipperiness could cause a problem.

Maxi Sheen can also be used for many other areas around the Home or Office for a surface protecting, durable sheen. It is excellent for treating sliding glass and drawer tracks, so they will slide easily.

Availability

375 mL and 4 litre

Maxi Dri Kleen Waterless Car Wash

Maxi Dri Kleen was formulated to enable all types of vehicles and surfaces to be cleaned WITHOUT THE USE OF WATER. The use of water for washing vehicles is restricted in some locations. It is ideal for cleaning vehicles in Showrooms, Airport Hire Car locations etc.

Maxi Dri Kleen is a unique spray on, wipe off cleaner and silicon wax, with anti-static properties. Its revolutionary formula removes all kinds of dirt, including tar, grease, oil, corrosive marks, crushed insects etc. It quickly penetrates the dirt layer, allowing quick and easy removal. The surface is then coated with a thin, durable film of silicon wax, that provides optimum protection of the surfaces for six to eight weeks.

Maxi Dri Kleen has low static conductivity, so the surface repels dust, and provides a long lasting shine. If the surface has become oxidised, clean it first with **Maxi Shine** or **Maxi Shield Cutting Wax**.

Laboratory testing by the Institute of Paints and Varnishes in West Germany has confirmed that its application to glass has no effect on opacity or visibility.

Application

Press the pump plunger firmly to spray a fine mist over an area of about one square metre. Wipe quickly and gently, with a porous cloth, whilst the surface is wet, and polish dry with an absorbent cloth. This leaves a gleaming waxed surface.

Maxi Dri Kleen contains no abrasives, so it cannot scratch the surface. The dust and foreign matter becomes encapsulated by the product, and then absorbed into the porous cloth for easy removal. Change the cleaning cloths frequently to maintain absorbency, and wash for economical use. It provides excellent protection for paintwork, chrome and plastic surfaces. It is fast, economical and convenient. It is pH neutral, phosphate free, bio-degradable, non-pollutant, non-combustible, non-corrosive and non-abrasive.

Availability

300 mL and 5 litre

Maxi Silk Polishing Wax

Maxi Silk is designed with the latest technology to provide a gleaming, long-lasting shine to surfaces in reasonably good condition. It contains the finest wax and silicones to help protect your car's surface finish from the adverse effects of the weather.

Maxi Silk is easy to apply and to remove, and does not leave a powdery residue. It resists water penetration, and this is evident in the way that water beads on its surface.

Application

Wash car with **Maxi Shine** and allow to dry. Shake bottle well and apply **Maxi Silk** evenly over small section of the car's surface with a soft, dry cloth and polish. The car's surface can be hand polished or machine buffed for a brilliant gleaming finish, that will last for 12 months. For poor or heavily weathered surfaces use **Maxi Shield Cutting Wax**.

Availability

375 mL and 4 litre

Maxi Shield Cutting Wax

Maxi Shield is a breakthrough new formula containing microfine abrasives that have been specifically designed to rejuvenate dull and faded surfaces, and remove light scratching. Paintwork that is in poor or heavily weathered condition will be rejuvenated, and oxidised surfaces and paint colours will be revitalised.

Maxi Shield has been formulated with the latest water based technology, silicones and the finest wax to provide a long lasting shine that helps protect your car's surface. It is safe and easy to use, and hard rubbing is not required. If your car's paintwork is in reasonable condition, use **Maxi Silk Polishing Wax**.

Application

Wash car with **Maxi Shine** and allow to dry. Shake bottle well and apply **Maxi Shield** evenly over small sections of the car's surface with a soft clean dry cloth and polish the surface. Allow the wax to dry and buff using a clean open weave cloth. Do not polish hot surface or in sunlight. Maintain with **Maxi Silk**.

Availability

375 mL and 4 litre

Note: Material Safety Data Sheets are available for industrial use, if required from Home Office.
