

WHAT A RESULT!

I have been using the full range of Pro Ma Performance Products including the diesel treatment, grease, MBL Concentrate and Spray in our farm equipment for nearly a year. I also co-ordinate a large industrial cleaning service and recently ran a test on one of our high pressure pumps. The high volume centrifical pump is driven by a 1969 190 HP Cummins Diesel Motor with a 50 gallon fuel tank. The pumps were on a set load circulating oil at 1800 rpm., for over one week. For the first 2 days without the Pro Ma Diesel treatment the tank would last 6 hours - you could set your watch by it! We then added the Pro Ma Diesel Treatment and the tank lasted for $7\frac{1}{2}$ hours; then for the next 2 days it increased and settled at $8\frac{1}{2}$ hours continuous running. At the end of the week the fuel tank needed filling after 12 Hours!! - DOUBLE the initial period. The load was constant and the weather unchanging - we were very impressed!! The exhaust also significantly cleaned up. We would not be without the Pro Ma Products now after these huge cost savings!!!
