One of two of the road graders which we operate is a John Deere 6466A which has a 6 cycl. turbo charged 155 SAE net h.p. (466 cu. ins.) engine. Recently we were introduced to a diesel conditioner made by Pro-Ma Systems, which we were told would control water in the fuel, clean the fuel system (injectors & pump etc.), give longer life to fuel filters and produce more power and cause a reduction in fuel usage. We keep at the Rural Municipality good records of the diesel usage of our plant. We were able to clearly note that while operating in the same conditions, by using the Pro-Ma diesel fuel treatment we were saving an average of over 30 litres of fuel per day! Needless to say this in dollars is a huge saving as the plant can operate eight hours a day, five days a week for 120 days. This product really works! I have been told that the Pro-Ma gasoline treatment works just as well! I am more than happy with these results.
