

GT5 Treatment MBL8 Oil Concentrate Testimony

My car is a 1987 Mercury Topaz with 127,000 km; 4 cylinder engine (fuel injection).

This letter is to let you know the many things that have happened to my car since I started using the **Pro-Ma Gasoline Treatment and MBL8 Concentrate**.

My car used to have a **problem with surging**. I would be stopped with my foot on the brake and my RPM gauge would go back and forth from 900 to 1300 continually. It used to have a severe problem with hesitating when you stepped on the gas. It was hard starting when it was cold and it left me stranded 3 times in 2 weeks last winter.

The first thing I noticed when I started using the GT5 gasoline treatment and MBL8 was **that I had more power**. When I stepped on the gas, the car would go without bogging down. I then **noticed that it was no longer surging** while I stopped. **All winter long I reached in and turned the key and my car started although it was never plugged in.**

My car has never been noted for having exceptional gas mileage. It was, however, consistent. I would be looking for a gas station when I had around 400 km on my odometer. On my last tank I got 600 km and took 50 litres of gas. That works out to 35 miles per gallon. I have 395 km on this tank of gas and my gauge is between three quarters and half full. **Gas mileage is now much better.**

Pro Ma Performance Products really do what they say they will do and I can recommend them to everyone without hesitation.

Yours truly,

Debbie Welder
