PERFORMANCE
PRODUCTS

TO THE READER:

We operate a large dairy farm and in 1998 I was introduced to the PRO-MA PERFORMANCE range of products by a good friend, Jeff Drudge. We are nothing short of *amazed and pleased* at the results that all of the products which include **diesel and gas fuel treatments, grease, oil concentrate additive and spray penetrant lubricant**. Several of the results we have seen with the **MBL Grease**, in particular, are:-

1. We have a **60' feed conveyor** for the dairy which would flip the circuit breaker with 400lb of feed on it. Using the **MBL Grease** I greased the 4 bearings on the drive-end and now the breaker flips at 500lb with identical material on the conveyor - *that's 20% more!*
2. We have two **256 New Holland hay rakes**, the universals were shot - So loose I couldn't believe they did not fall apart. In Spring of 99 we started using the **MBL Grease** in the universals and **raked about 800 acres of hay**, and they are still running. *This MBL Grease is unbelievable.*
3. We have a **Knight 716 Manure Spreader** which with our former grease we would have manure running out through the bearings within 10 to 12 loads. We pumped the **MBL Grease** into the bearings and after 150 loads between greasings the **MBL Grease is still there doing its job** and no manure is running through the bearings! *The MBL Grease stays put!! That's more than 12 times the grease life!!*

***** In the past to grease all of our equipment for a year we would have used between 65 to 70 tubes of grease -In 1999 we used ONLY 17 TUBES OF PRO-MA GREASE WHAT A SAVINGS! This MBL GREASE LASTS LONGER AND SO DO THE COMPONENTS. YOU BET WE ARE HAPPY WITH THE RESULTS.**
