Re: Pro-ma Performance MBL Grease

We know that using the MBL grease in our power tongs will not only save our customers money on maintenance, but on down time as well. The superior operating range in both high and low temperatures is more than adequate for our use. Under severe shock loading and high pressure, the grease remains where it is put, providing superior lubrication and extending lubrication periods. The grease resists water and water washout, protecting against rust and also provides oxidation stability.

Unlike most power tongs that are on the market, ours are gear driven and do not have a clutch plate.

This grease is the best on the market.

Yours truly,

Gerry Reeves  
President

## SPECIFICATIONS:

Low Gear Rated Torque	: 4500 ft. lbs. Max. 6000 ft. lbs
High Gear Rated Torque	: 1100 ft. lbs.
Low Gear Rated Speed	: 20 r/min.
Hear Gear Rated Speed	: 85 r/min.
Main Tong Weight	: 330 lbs.
Backup Tool Weight	: 154 lbs.
System Rated Pressure	: 1600 psi.
G. P. M.	: 22 - 25 gal./min.
