To the Reader,

My 1982 835 Versatile Tractor has an 855 Cummins In-line 6 cylinder turbo engine producing 230 b.h.p. I use it to pull 41 feet of 55 chisel plough and it has 3400 hours on the clock. This tractor has always run well but when I began using the Pro Ma MBL concentrate in the engine, I noticed within two hours of field work an increase of 30 R.P.M. in engine revs and now even smoother starting. The results of this combined with better power after using the diesel treatment has really impressed me.

My 1977 800 Versatile tractor has a 855 Cummins in-line 6 cylinder 235 h.p. and pulls a 35' 55 chisel plough. It has done 2400 kms and was smoking. I now notice much less smoking, smooth starting since using 250 gallons treated with the Pro Ma diesel treatment.
