To Whom it May Concern:

On July of 1998 we were approached by an Independent Pro-Ma Distributor asking us to consider using the Pro-Ma line of performance products. He proceeded with a demonstration of the products that was convincing as to the quality and their durability. We placed a small order at the time, which gave us a sampling of the MBL Grease, the MBL8 and the MBL3, and 2 litres of DT5.

Having said the demonstration was impressive, the real life application of these products was beyond belief. The grease outperformed our wildest expectations.

Being an asphalt contractor our equipment operates in extreme heat conditions. Our asphalt spreader, which ordinarily takes 5 shots of grease per bearing per day dropped to 3 shots once a week per bearing.

We have also realized a considerable reduction in volume of grease used on our track shovels and wheel loaders as well. Bucket pins are also no longer a point of concern as the squeaking has been eliminated and wear is reduced to almost nil.

The MBL8 among other things gave us better steering control out of the paver when added to the hydraulic reservoir since the oil temperature dropped and average of 35 degrees.

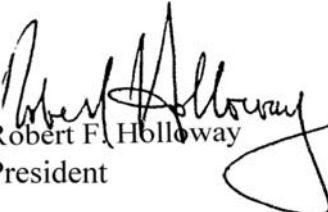

The MBL3 has added at least one season to the life of roller drive chains.

Our 3 dump trucks have all but stopped smoking and power has increased by no less than 10% throughout the entire fleet of equipment.

After using these products for about 3 weeks, we contacted our distributor and asked him to supply us with larger quantities of each of the products we had originally ordered.

Having seen many products demonstrated in the past 15 years in this business I must tell you; this is the first line that has surpassed all the claims of those who sell the product.

Sincerely,

  
Robert F. Holloway  
President
