

NIGHTHAWK VACUUM SERVICES LTD.

We started using the MBL 8, June 2001. We found the transmissions shifting smoother and running cooler by approximately 20-25 degrees. We also found the differentials running much cooler.

In the engines, smoke went down approximately 40-50%. The vacuum trucks with the hy-bon pumps cooled by 70 degrees. Vane pumps run much quieter.

The penetrating spray we have been using for 1 year. Door hinges very noticeable to wear and squeaking. Wing nuts on rear vacuum doors work excellent and stay lubricated up to 1 month vs. the need to lubricate them twice a week with other products.

Mechanics can be more efficient with MBL 3.

We will continue to use these proven products from Pro-Ma Systems.

Shop Supervisor

Update: We are now using the MBL Grease on all of our equipment. We have cut our driveline maintenance by 60-70%. We continue to use the MBL 8 in the engine and hydraulic oil with great results. The MBL 3 spray is working great for the mechanics as well. The complete line of MBL products has saved us a great deal of time and money.
